

## BOSO ERGON SORBENTS OIL ONLY (WHITE)

The Boso ERGON Sorbents oil-only booms are developed to prevent or fight all kinds of oil pollution, especially on water. These booms and pillows are, just like the other oil-only products, made of 100 % polypropylene and are able to absorb up to 25 times their own weight. The Boso ERGON Sorbents oil-only booms are water-repellent, so even when the booms are fully saturated with petrol-based liquids they will still float on water and will still remain as a barrier to prevent further oil spreading.

The Boso ERGON Sorbents oil-only booms are equipped with metal hooks and rings, so they can easily be connected to each other with partial overlap. The absolutely

best boom is recognisable by the characters "SN" mentioned on the packaging. These booms are equipped with a strong net, called Sock-Net and are lint-free. This net prevents the boom from falling apart under severe circumstances and prevents the booms from losing its function. With this net you can use the capacities of the boom for the full 100 %. The Boso ERGON Sorbents oil-only pillows, with their strong cord, are mostly used for separating oil-bearing liquids from water in hard to reach places like sewage systems and sumps. The Boso ERGON Sorbents oil-only pillow will absorb oil till it is saturated. Of course it retains all the absorbed liquids.
